Living Space Roof Kits - A new approach

A roof system you can trust

Having been launched over 30 years ago the Newdawn Roof has stood the test of time and remains the Professional's choice with its flexibility and wide range of options.

Aluminium or PVC finish – the choice is yours

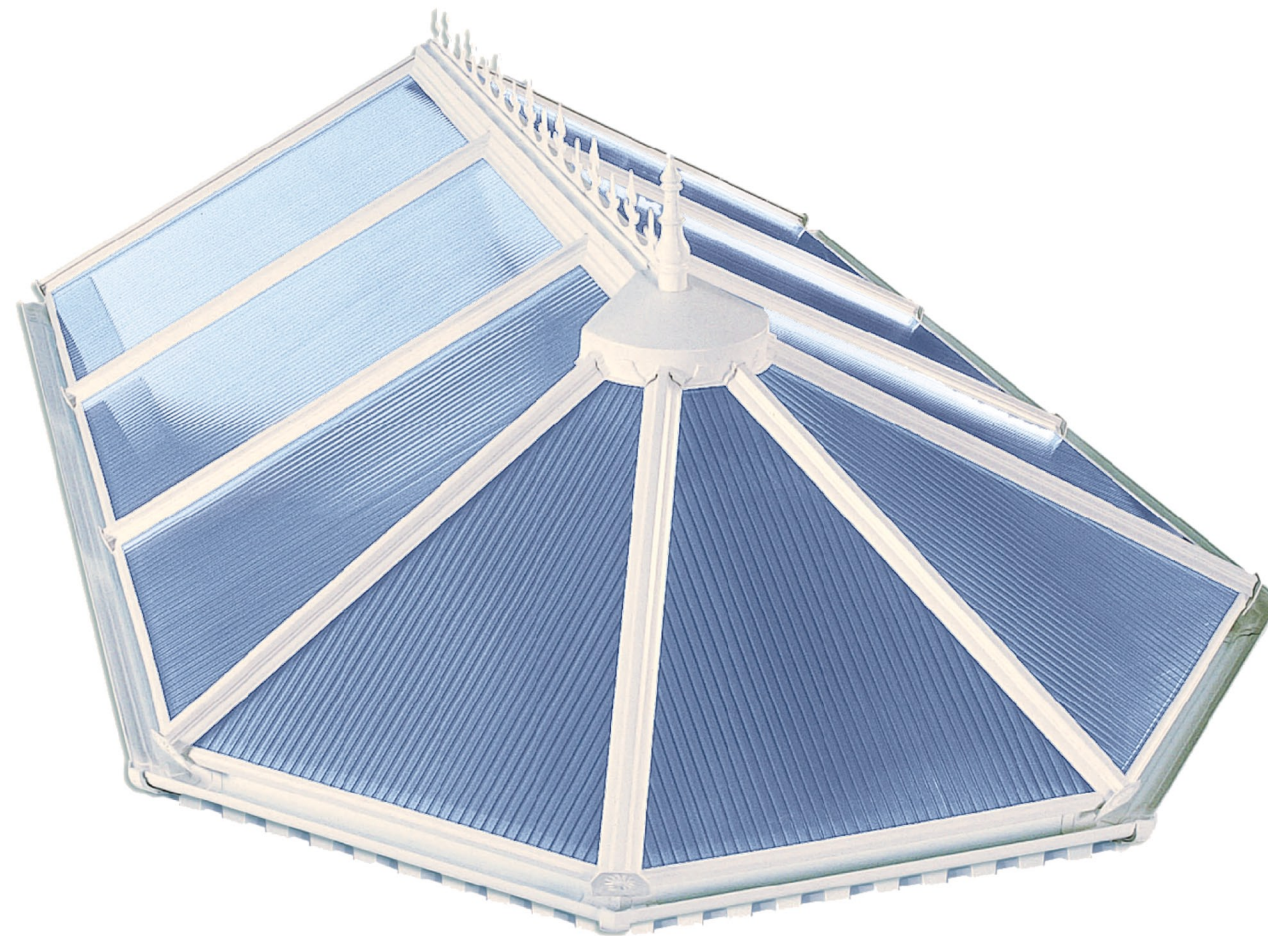

The Newdawn Roof offers both PVC and Aluminium finishes for Capping, Crestings, Finials, and Guttering allowing you to choose the option which best matches your property.

Wide range of colours

PVC capping is available in White, Brown, Golden Oak, Mahogany or Rosewood finishes. Aluminium capping comes in White, Brown, Golden Oak, foiled Wood Grain or Mahogany or we can paint it any RAL colour of your choice!

Aluminium or PVC Guttering

Whether you want to use a standard PVC gutter, a concealed fixing one, or to upgrade to our innovative Aluminium Ogee Gutter, the Newdawn system incorporates all three easily, giving a professional finish every time.

Easy to install

Whatever options you choose the Newdawn Roof is supplied "pre-prepped" making on-site fitting quick and easy. All more complex roofs are pre-built to ensure accuracy and your peace of mind.

Available accessories

A fully welded PVC Roof Vent with an aluminium inner provides superior performance, low maintenance and long life features. A range of internal fascia or cladding options gives the internal appearance that you desire.

Heavy Duty bars for longer span roofs

The Newdawn system is renowned for its superior strength with a range of bars suitable for heavier loading applications. Our Titan roof bar can span up to 5m with 35mm polycarbonate glazing!*

* 4950mm span from wall to inside of eaves beam with 35mm polycarbonate – based upon a loading of 0.6KNm²

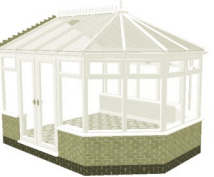

Full Technical Support

We can provide 3D line drawings to assist your sales presentations as well as detailed layout drawings to assist installation.

Conservatory Designs

Victorian

The classic Victorian style gives a nostalgic appearance that adds charm, elegance and character to any home. Adding a hip to the back of the roof allows the Victorian to fit onto a bungalow or a low pitched roof.

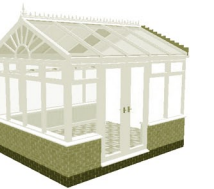

Edwardian

The square fronted style gives the optimum internal floor space with an elegant hipped roof and bold strong lines. It makes an ideal extension to any home. The style can also incorporate a box gutter making it suitable for low eaves bungalows.

Gable

For a really striking effect combined with the maximum floor space this version can have a plain or decorative gable. It is ideal for a glass roof and suitable for almost any style of property where a light and airy feel and distinct appearance are required.

Lean To

The traditional lean to is the most practical and cost effective way to add space – flexible in design the roof pitch can be varied to suit almost any situation. Roofs can be hipped to add style or the corners rounded to give the beauty of a Victorian design whilst being just a little different.

P Shape

The P Shape combines a mix of Lean-to and Victorian or Edwardian styles. They provide the maximum amount of space whilst maintaining the overall proportions of the conservatory in keeping with the property and garden.

Lantern

A lantern is a glazed structure installed on a flat roof and is also referred to as a skylight. Glass or polycarbonate glazing allows natural light to flood into any room.
